INTERACTIONS: When Zooby Varnish is applied, other fluoride preparations, such as fluoride gels, should not be administered during the same day. The routine use of fluoride tablets should be interrupted for several days after treatment.

ADVERSE REACTIONS: Edematous swellings have been reported only in rare instances in some fluoride varnish products, especially after application to extensive surfaces. Dyspnea, although extremely rare, has occurred in asthmatic children. Nausea has been reported when extensive applications have been made. If required, varnish film can be removed with a thorough brushing.

Refer to Safety Data Sheet for additional information. For emergencies, contact INFOTRAC at 1-800-535-5053.

Made in USA

Store at controlled room temperature.
INSTRUCTIONS FOR USE:

1. Peel open the foil lidding material starting from the unsealed tab.

2. For best results, dry teeth prior to application.

3. Apply a very thin coat of varnish evenly to all desired tooth surfaces.

4. Let the varnish dry for approximately 10 seconds and then instruct the patient to close his or her mouth.

5. Varnish hardens on contact with saliva, so the patient may leave immediately after application.

6. When dry, any excess varnish may appear “spotty” and may slide off the tooth surface. This will not affect the efficacy of the product as there is still a full layer of varnish on the tooth.

7. It is recommended that the patient be instructed to only eat soft foods and drink cold liquids for two hours after treatment. After six hours, the patient may consume hot drinks or alcohol (mouth rinses) and may brush or floss.
